Security Consensus Operational Readiness Evaluation

This checklist is from the SCORE Checklist Project. Reposting is not permitted without express, written permission.

SCORE Security Checklist

The six step incident handling process is appropriate for all forms of incidents, including Advanced Persistent Threat (APT) style attackers. The APT is characteristically well funded teams of workers who are tasked with ex-filtrating intellectual property from targeted organizations. The data sought is typically insufficiently defended relative to its value, creating a situation where funding the theft of the data is economically advantageous compared to developing the data from scratch. At times, however, the adversary's intent is to diminish the value of the data to the rightful owner. Denial of service reduces the availability of the data. Potentially more damaging would be manipulating the integrity of the data such that the data owner acts in error based on the tampered data.

While the Incident Handling process is adaptable to respond to APT style attacks, and some actions should be taken for any incident regardless of the threat involved, there are response strategies that are better suited to an APT compromise. The following outline is intended to be a checklist of actions appropriate to dealing with the threat and a compromise accomplished by this threat. Customized tailoring to each environment and situation is warranted and recommended. But this guide is a generalized set of actions appropriate to APT response.

1. Preparation
 1. Identify ownership and responsibility for all systems (including data) in the enterprise
 2. Clear communication channels
 1. Capabilities for encrypted email communication (potentially not using primary email server)
 2. Capabilities for encrypted chat messaging (potentially not using primary chat server)
 3. Telephone call list for coordination stored offline
 4. Understanding which parties are to be notified
 1. Develop contact list per system
 1. System Owner
 1. Possibly designated Point of Contact (POC), too
 2. Technical POCs
 1. Possible after hours / rotation / call list for response
 3. Incident Response aware of and capable to address APT style attacks
 1. Clear understanding of this threat's characteristics
 1. Management has clear understanding of the threat
 2. Authorized to respond on all systems in enterprise
 3. Funded to perform extended investigations
 1. If Incident handling isn't currently 24x7, what resources are available to continue IR work throughout sustained response
 4. In house capability or contracts with business partner for
 1. Incident Response
 2. Forensic Investigation
 3. Malware Reverse engineering
 5. Containment Strategy for APT
 1. Two basic strategies:
 1. Watch and Learn
 2. Disconnect
 2. Define the Standard Operating Procedures (SOP) for when each scenario is used
 3. Define a methodology for an incident responder to deviate from SOP as needed

1. This methodology should be part of SOP
 1. Include steps for notification and justification of planned deviation
6. Press Team
7. Legal Team
2. Identification
 1. Remote Access Trojan (RAT)
 2. Command and Control (C+C)
 3. Encrypted Communications discovered
 4. Covert Channel discovered
 5. Host based IDS/IPS alert of unexpected system call, data access, port open
 6. Direct External Notification (Law Enforcement, Business Partner)
 7. Indirect External Notification (Open Source Intelligence of behavior, search in your environment)
 8. Data discovered outside of organization (pastebin, news)
 9. Blackmail "offer"
 10. Notification to internal staff must occur in a discrete fashion
 1. Encrypted
 2. Limited to only those with need to know
 3. Authorization to add additional resources to response effort is limited to Incident Response Management, and/or Business Unit Management
 4. Categorize known Severity and Impact
 5. Provide updates as important new information comes to light
3. Containment
 1. Watch and Learn versus Disconnect
 1. Have this plan in place in advance! (per Preparation phase)
 2. Extract and identify characteristics of adversary
 1. Identify other affected systems
 2. Utilize updated Network Intrusion Detection System (NIDS) / Network Intrusion Prevention System (NIPS) / Host Intrusion Detection System HIDS / Host Intrusion Prevention System (HIPS) signatures to assess assets throughout environment.
 1. Update NIDS/NIPS/HIDS/HIPS to search for characteristic:
 1. Files
 2. System calls
 3. Processes
 4. Network
 1. Ports
 2. IP addresses
 3. Host names
 2. Use Packet Capture (pcap) / network forensic devices to replay old traffic to identify additional infected systems
 3. Identify what has been stolen
 1. Full pcap (which retains a copy of all data from the wire) is invaluable in this regard
 1. Even w/ full pcap, traffic may be encrypted
 2. Must break encryption to fully assess damage
 3. May need host based forensics in coordination with full pcap to complete this assessment
 2. Intellectual Property

3. Resources
 1. Bandwidth
4. Identify legal ramifications
 1. PCI
 2. HIPAA
 3. California HR (SB 1386) notification requirements
 4. European data breach requirements
 5. Many possible other legal ramifications
5. Is it appropriate to remove entire segment from network (disconnect?)
 1. May be easier to identify malicious network traffic if the environment is still online because the traffic is still flowing, but may have ongoing loss of data
6. Contact Law Enforcement (LE)?
 1. FBI typically interested in this sort of attack
 2. The decision to involve LE may affect the amount of and degree of public reporting
7. Public Reporting?
 1. US-CERT
 2. Industry requirements?
 1. Defense Industrial Base (DIB)
 2. Medical
 3. Sarbanes-Oxley (SOX) / Gramm-Leach-Bliley (GLB)
 3. Partner notification
 4. Customer Notification
4. Eradication
 1. Imperative that all affected systems be collected, and full forensic images be made.
 1. Memory Images very important for APT since some techniques do not write to hard drive
 1. Also may assist in assessment of ex-filtrated data
 1. If data ex-filtration uses symmetric cipher, then decryption key will be present in Random Access Memory (RAM)
 2. Preferred method is to seize hard drives as evidence, replace those hard drives with new system image.
 1. Preferred because this drive is the legal evidence of wrongdoing
 2. Any pcap / network information that could be evidence must also be preserved
 1. Have SOP showing handling of evidence for pcap
 2. Associate with case, make MD5 and SHA256 hash of stored pcap
 3. Secondary option is to make forensic image (for example, remotely via encase enterprise or another enterprise forensic solution, then wipe drives and re-image
 4. Without this evidence, a thorough investigation cannot be completed
 2. Close all network vectors of ex-filtration
 1. HTTPS inspection via proxy and Secure Socket Layer (SSL) intercept
 2. Prohibit outbound encrypted communication except for known, authorized peers
 3. Techniques demonstrated during this APT incursion
 3. Close all vectors of re-infection
 4. Remove all RAT / C+C / Backdoors
5. Recovery
 1. Close future network vectors of ex-filtration
 1. HTTPS inspection via proxy and SSL intercept

2. Prohibit outbound encrypted communication except for known, authorized peers
2. Re-engineer systems to prevent reinfection
3. Segment critical data to more restricted areas
4. Implement auditing for critical data access
5. Identify individuals within environment who purposefully or accidentally aided APT, for counseling / training / discipline
6. Lessons Learned
 1. Assess Executive posture toward Incident Handling and Information Assurance. Is this loss just a cost of doing business, or is it an opportunity for massive change?
 2. Develop Intelligence group for identification of APT attacks
 1. Characterize the adversary
 1. Use "Kill Chain" model or other counter-intelligence strategies
 2. Adversary has limited resources, as well. Will re-use assets.
 3. Attribution is very difficult, but is the end goal for counter-intelligence activities.
 3. Campaign to assist business members of various sorts of threats
 1. Malware drive by download = smash and grab from car
 2. APT = home invasion / hostage situation
 3. Explain potential loss of long term competitive advantage of business due to loss of IP
 4. Re-catalog and re-value assets in light of APT strategies and targets
 1. Avoid Blame, use incident to enhance capabilities
 5. Enhance methods for APT response, including
 1. "Watch and learn" capabilities
 2. Honey tokens for Intellectual Property (IP)
 3. Active honey-nets
 4. Deception capabilities
 6. Aggregation of data from all sources
 1. Security Information and Event Management (SIEM) if possible
 2. Identify additional data sources
 1. Firewalls
 2. HIDS
 3. Windows Active Directory (AD) / Lightweight Directory Access Protocol (LDAP) / Authentication
 4. Wireless infrastructure
 5. Any system not currently providing data
 1. Servers
 1. Web servers
 2. Data base servers
 2. Workstations
 3. Mobile devices

Upcoming SANS Training

[Click Here for a full list of all Upcoming SANS Events by Location](#)

SANS San Jose 2017	San Jose, CAUS	Mar 06, 2017 - Mar 11, 2017	Live Event
SANS Secure Singapore 2017	Singapore, SG	Mar 13, 2017 - Mar 25, 2017	Live Event
SANS Secure Canberra 2017	Canberra, AU	Mar 13, 2017 - Mar 25, 2017	Live Event
SANS London March 2017	London, GB	Mar 13, 2017 - Mar 18, 2017	Live Event
ICS Security Summit & Training - Orlando	Orlando, FLUS	Mar 19, 2017 - Mar 27, 2017	Live Event
SANS Tysons Corner Spring 2017	McLean, VAUS	Mar 20, 2017 - Mar 25, 2017	Live Event
SANS Abu Dhabi 2017	Abu Dhabi, AE	Mar 25, 2017 - Mar 30, 2017	Live Event
SANS Pen Test Austin 2017	Austin, TXUS	Mar 27, 2017 - Apr 01, 2017	Live Event
SANS NetWars at NSM Security Conference	Oslo, NO	Mar 28, 2017 - Mar 29, 2017	Live Event
SEC564: Red Team Ops	Atlanta, GAUS	Apr 06, 2017 - Apr 07, 2017	Live Event
SANS 2017	Orlando, FLUS	Apr 07, 2017 - Apr 14, 2017	Live Event
Threat Hunting and IR Summit	New Orleans, LAUS	Apr 18, 2017 - Apr 25, 2017	Live Event
SANS Baltimore Spring 2017	Baltimore, MDUS	Apr 24, 2017 - Apr 29, 2017	Live Event
SANS London April 2017	London, GB	Apr 24, 2017 - Apr 25, 2017	Live Event
Automotive Cybersecurity Summit	Detroit, MIUS	May 01, 2017 - May 08, 2017	Live Event
SANS Riyadh 2017	Riyadh, SA	May 06, 2017 - May 11, 2017	Live Event
SANS Security West 2017	San Diego, CAUS	May 09, 2017 - May 18, 2017	Live Event
SANS Zurich 2017	Zurich, CH	May 15, 2017 - May 20, 2017	Live Event
SANS Northern Virginia - Reston 2017	Reston, VAUS	May 21, 2017 - May 26, 2017	Live Event
SANS Melbourne 2017	Melbourne, AU	May 22, 2017 - May 27, 2017	Live Event
SANS London May 2017	London, GB	May 22, 2017 - May 27, 2017	Live Event
SANS Dallas 2017	OnlineTXUS	Feb 27, 2017 - Mar 04, 2017	Live Event
SANS OnDemand	Books & MP3s OnlyUS	Anytime	Self Paced
